India

30% efficiency gain in analytics workflows

83% ServiceNow platform health, up from 60%

92% co-pilot accuracy on simulated emergencies

70% less manual triage with ML classifiers

Profile

Technical Lead and AI/ML professional with **6+ years** across Agentic AI, Generative AI, enterprise data, platform architecture and analytics at **Airbus**, **NTT DATA** and **KnackForge**. Hands-on with LLMs, RAG, multi-agent systems, Transformer architectures and multimodal fine-tuning, built on strong Python, MLOps and cloud-native deployment across AWS, GCP and Azure. Pairs research rigour with technical product management, solution architecture and stakeholder management to turn business problems into AI products and automation.

Experience

KnackForge Soft Solutions Pvt Ltd
Aug 2026 – Present

Technical Lead, Technical Product Management – Agentic AI

- Lead Agentic AI initiatives for an AI-assisted SDLC, covering requirements, planning, development, testing, documentation and delivery.
- Architect agentic AI solutions and multi-agent workflows: agent responsibilities, orchestration patterns, tool integration and enterprise integration points.
- Own the technical product lifecycle: turn business problems into requirements, define capabilities and roadmaps, prioritise use cases and align delivery with stakeholder outcomes.
- Drive architecture and technical decisions for LLM-powered applications, retrieval workflows, agent orchestration and AI automation.
- Partner with product, engineering and business stakeholders to turn automation opportunities into scalable enterprise AI solutions.

NTT DATA
Feb 2026 – Aug 2026

Senior Consultant, GenAI Centre of Excellence

- Developed enterprise Generative AI solutions and LLM-based prototypes to evaluate enterprise AI use cases and speed up GenAI adoption.
- Built and refined Palantir data pipelines for AI experimentation, data preparation and downstream analytical workflows.
- Turned business requirements into technical GenAI proofs of concept and solution designs with cross-functional stakeholders.

Airbus
Aug 2020 – Jan 2026

Business Intelligence Analyst

AI & GenAI

- Spearheaded end-to-end AI research initiatives, architecting GenAI pipelines with Transformer architectures and RAG for real-time decision support.
- Integrated advanced ML and multimodal models with cross-functional teams, driving a **30% efficiency gain** in analytics workflows.
- Led experimental design and statistical validation, deploying prototypes on AWS and GCP for measurable business impact.
- Built GenAI solutions with Vertex AI / Gemini, RAG and AI-agent patterns for ITSM, asset management and user support.
- Mentored team members on AI research best practices, code reviews and MLOps.

Skills

Agentic & generative AI

AI agents | Prompt engineering | Multi-agent systems | Transformers | LLMs | SLMs | Diffusion models | RAG | NLP | Multimodal AI | AI SDLC automation

ML & data engineering

Python | ETL | BigQuery | JavaScript | PyTorch | TensorFlow | Hugging Face | Vector databases | Data modelling | Predictive analytics

Research & statistics

Experimental design | Error analysis | Statistical validation | Hypothesis testing | Reproducibility | Uncertainty estimation

MLOps & cloud

MLflow | CI/CD | Docker | Azure | Weights & Biases | AWS SageMaker | Kubernetes | GCP Vertex AI

Platforms & BI

Palantir Foundry | ServiceNow ITSM | Vulnerability Response | Confluence | Looker Studio | Airbus Skywise | Power BI | CMDB | Git & GitHub | Jira

Architecture & product

Solution architecture | Agile delivery | Enterprise architecture | Roadmaps | Technical product management | Requirements engineering | Stakeholder management | Data governance | Release management

Airbus, continued

Aug 2020 – Jan 2026

Business Intelligence Analyst

Digital Workplace analytics

- Built enterprise dashboards and reports in Looker Studio, Palantir and Power BI for Digital Workplace analytics.
- Integrated and analysed enterprise datasets with Google BigQuery and Airbus Skywise.
- Automated reporting workflows with ServiceNow, cutting manual effort for data-driven operational decisions.
- Delivered data modelling, ETL and predictive analytics; shaped data governance and analytics strategy with international stakeholders.

ServiceNow Platform Architect & Release Engineering, earlier role

- Moved into the Core ServiceNow Platform & Architecture team, extending platform capabilities in line with organisational goals.
- Led an end-to-end ServiceNow on-premise implementation, from planning through execution.
- Implemented and integrated Vulnerability Response Management on-premise, the **first ServiceNow project globally** to do so.
- Coordinated release planning and deployment with development, QA and operations teams, keeping releases on track and low-risk.
- Led two platform upgrades end to end and the Platform Health Scan, lifting platform health from **60% to 83%**.

Selected AI & data projects

Cockpit LLM Co-Pilot

DistilGPT-based LLM, RAG, local SQLite vector store, PyQt

Offline LLM assistant that answers pilots' emergency queries with retrieval over a local vector store, reaching **92% accuracy** in simulation.

Malware & Gambling-Site Classifiers

Python, scikit-learn (Random Forest, Gradient Boosting), Docker, Flask API

Classifiers with **95% malware detection** and **93% gambling-site accuracy**, cutting manual triage by **70%**.

QuickAnemia Scan

XGBoost, Streamlit, demographic and haemoglobin data

Fast anaemia screening with **88% test accuracy** and **90% sensitivity**, aimed at early detection in underserved communities.

SMS Genie Bot

Node.js, Twilio, Dialogflow, MongoDB, Google Calendar

SMS chatbot that automated **60% of customer enquiries**, widening access to support.

Smart Rainwater Harvesting

Arduino sensors, ESP8266, MQTT, Node-RED, Azure, Grafana

IoT system that prevents tank overflow and optimises water storage for drought-prone areas.

Education

M.Tech, Software Systems (Data Analytics)

BITS Pilani, Work Integrated Learning Programme
Apr 2023 – Mar 2025

Coursework in algorithms, database design, distributed computing, software architecture, advanced statistics, applied ML, deep learning and NLP. Dissertation: LLM assistant for aircraft pilots, with Airbus.

Bachelor of Engineering

KCG College of Technology, Anna University
Apr 2016 – Mar 2020

Achievements

- **Winner, Airbus India Ideathon** for "NFT for Airbus", awarded by the CEO, Airbus India & VP South East Asia
- **Runner-up, Digital Sharks** for "Compliance as a Service"
- **First ServiceNow project globally** to implement Vulnerability Response Management on an on-premise instance
- **Platform health 60% → 83%** across the ServiceNow estate
- **Smart India Hackathon** finalist, twice
- **Core Committee** volunteer, Airbus Aerothon

Certifications

- Palantir Advanced
- Python for Data Science
- Dell EMC Academic Associate, Data Science & Big Data Analytics
- Advanced Diploma in Hardware & Networking, Pearson UK certified

Ways of working

Mentoring · Adaptability · Cross-functional teamwork · Communication · Problem-solving

Roles I'm targeting

AI Solutions Architect · GenAI Lead · Agentic AI Lead · AI/ML Lead · AI Engineering Lead · Technical Product Manager · AI Product Manager · Data & AI Architect · Data Product Manager · Senior AI Engineer · AI Research Scientist
